

## Project Design Phase-II

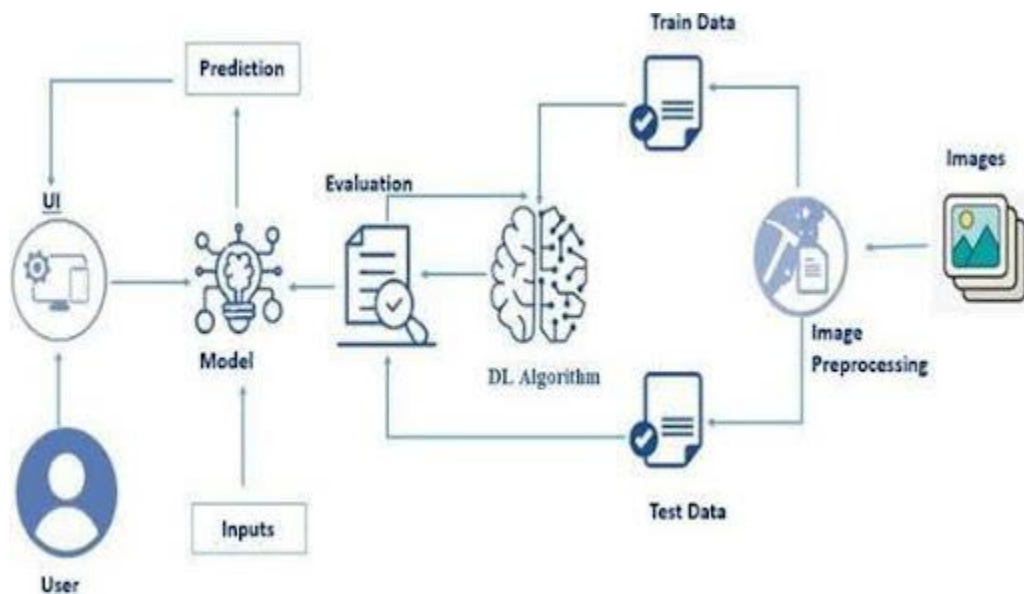

### Technology Stack (Architecture & Stack)

|               |  |
|---------------|--|
| Date          | 25 June 2025   |
| Team ID       | LTVIP2025TMID35506   |
| Project Name  | CleanTech:Transforming Waste Management with Transfer Learning |
| Maximum Marks | 4 Marks  |

#### Technical Architecture

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2.

Example: AI-powered system for waste categorization and optimization using Transfer Learning.

**Table-1 : Components & Technologies:**

| S.No | Component Description | Technology                                    |
|------|-----------------------|---|
| 1    | User Interface        | HTML, CSS, JavaScript                         |
| 2    | Application Logic-1   | Python  |
| 3    | Application Logic-2   | Transfer Learning Module                      |
| 4    | Application Logic-3   | Waste Type Classification Algorithm           |
| 5    | Database              | MySQL   |
| 6    | Cloud Database        | AWS RDS / Firebase (optional)                 |
| 7    | File Storage          | AWS S3 / Local Filesystem                     |
| 8    | External API-1        | Geolocation API for waste tracking (optional) |

|    |                                 |   |
|----|---------------------------------|---|
| 9  | External API-2                  | Municipal Integration API (optional)              |
| 10 | Machine Learning Model          | Transfer Learning Model (e.g., ResNet, MobileNet) |
| 11 | Infrastructure (Server / Cloud) | Local / AWS EC2                                   |

**Table-2 : Application Characteristics:**

| S.No | Characteristics Description | Technology                               |
|------|-----------------------------|--|
| 1    | Open-Source Frameworks      | TensorFlow, Keras, Flask/Django          |
| 2    | Security Implementations    | SHA-256, HTTPS, IAM (Cloud)              |
| 3    | Scalable Architecture       | Microservices / Modular Design           |
| 4    | Availability                | Cloud Load Balancers / Redundant Servers |
| 5    | Performance                 | CDN, Caching, Efficient Model Loading    |
